

SPARC distance-method census (175 galaxies)

flow distances 97 galaxies (assume $H_0 = 73$)	anchored 50 TRGB 45 Cep 3, SN 2	Ursa Major 28 (cluster)
---	---------------------------------------	-------------------------------

*circular for a direct
inversion: the distance
scale already assumes H_0*

CF4 per-method
reclassification
(11 galaxies)

curve-quality cuts: 50 $\rightarrow$ 41, 28 $\rightarrow$ 26

flow arm (71 usable galaxies)
self-consistent solve for $a_0(H_0)$
consistency test only:
power-limited at SPARC depth (mass-to-light pole)

anchored arm (78 galaxies)
41 anchored + 26 UMa + 11 CF4-reclassified
direct inversion $H_0 = 2\pi a_0/c$
the measurement arm
