

(a) the dial by galaxy class

(b) none dissolves the sign reversal

the eight controls (Table 4):

- | | |
|--|---|
| 1. gas budget scaled x0.5-2.0 | dial shift 0.000 |
| 2. measured distance/inclination priors on | dial stays (-0.66) |
| 3. galaxy bootstrap, 300 replicates | $P(\text{GD reaches DD}) = 0.0000$ |
| 4. regime control (deep DD vs GD points) | $P = 0.0000$ (200 replicates) |
| 5. quality-flag halves | -0.64 vs -0.61 (agree) |
| 6. pressure support | ordered by V ($P = 0.033$); lever too small |
| 7. measured environment (ambient field) | field-typical (perm $P = 0.81$) |
| 8. rising-curve galaxies removed | full dial shift +0.061 (immune) |
